

Mini- Project Synopsis

TITLE: Students Placement Preparation Portal

Problem Statement: Preparing for campus placements is often challenging for students due to scattered resources, lack of structured guidance, and limited interaction with alumni or industry experts. There is a need for a centralized digital platform that provides study materials, aptitude practice, mock tests, interview preparation, and alumni feedback to help students improve their placement readiness.

Description: This project focuses on developing a web-based portal that assists students in preparing for campus placements. The portal will provide resources for aptitude, technical, and soft-skill training. It will include modules for practice quizzes, company-specific interview preparation, resume uploads, and alumni guidance. Admin users can manage resources, upload company details, and schedule mock tests. Students can track their progress, take practice tests, and receive instant feedback. Additionally, alumni can contribute by sharing their placement experiences and tips, bridging the gap between students and industry

Expected Outcomes: The portal will serve as a one-stop solution for placement preparation, enhancing student confidence and performance during recruitment drives. It will streamline resource management, encourage peer and alumni interaction, and reduce the dependency on external preparation platforms. Ultimately, it aims to improve placement success rates and provide structured guidance to students.

Technologies and Tools:

- Languages/Frameworks: Python, Django (for web development)
- Database: MySQL / SQLite
- Frontend: HTML, CSS
- Additional Tools: Django Admin Panel (for resource & user management)
- Optional: Integration of PDF upload/viewer for resources, email notifications for updates

Team Members:

Ayesha S (4AI23CD005)

Ayesha Siddiqua (4AI23CD006)

Bhoomika K (4AI23CD008)

Kaivalya Sudhir (4AI23CD021)
